Copper Telluride

Standard

ST TOO 40438373-282-2010

Description

Copper Telluride is produced in the precious metal units of copper-melting factories, where with the help of copper powder, Copper telluride is obtained. The product is fine-dispersed, moisture-laden, pelletized and is green in colour with no smell.

Chemical composition: up to 45% Te, up to 60% Cu (both components are in terms of dry product).

Usage

Used in the production of pure Tellurium and in the extraction of Copper.

Other

Packaging – "Big-Bags" or a soft single-use container.

Transportation – by auto transport or railways in closed wagons or containers.
